

ECC-ENERGY CHARGE POINT MANAGEMENT SYSTEM

ECC-Energy CPMS (Charge Point Management System) is a software platform developed specifically for eMobility applications and offers our customer a web-based charge point management solution that enables real time visibility, monitoring and usage of all their charge points in their network.

For multi-site businesses our CPMS (Charge Point Management System) enables full access, control, reporting and management for all locations and users.

Our system is scalable, user friendly and gives easy access to charge point activity and energy consumption.

Customers can download EV Charging reports for each charging event including:

- Charge point access by contactless card/fob ID – issued to individual drivers
- Date and time of start of charge.
- Date and time of end of charge.
- Total kWh consumed during each charging event.
- Payment / Invoicing facility.
